

Docket Nos. 42310 & 42311
Georgia Power Company's 2019 IRP and 2019 DSM Application
STF-JKA Data Request Set Number 1

STF-JKA-1-35

Question:

What steps did the Company take to place the Stewart County Site in suspension for building a nuclear unit? Is or has the Company considered using the site for any other purpose or has the Company considered selling the site? Please explain.

Response:

As stated in the 2018 Stewart County Site Investigation Annual Report ("2018 Report"), preservation activities included completing and forwarding evacuation time estimates to local emergency management organizations, data collection from the onsite meteorological tower, tower maintenance, onsite utilities, and IT support. As reported in Attachment G of the 2019 IRP Main Document, following the 2018 Report, the meteorological tower was dismantled and stored on-site. No further preservation activities are planned, thereby concluding all work associated with the Stewart County Site.

The Company is considering all options for the Stewart County site but at this time continues to expect the site to be developed into a future source of generation.
